

Third-Party Risk Management Capabilities

Delivering practical frameworks and tools that enhance third-party risk management and strengthen resilience across supply chains

Amstelveen

Who we are

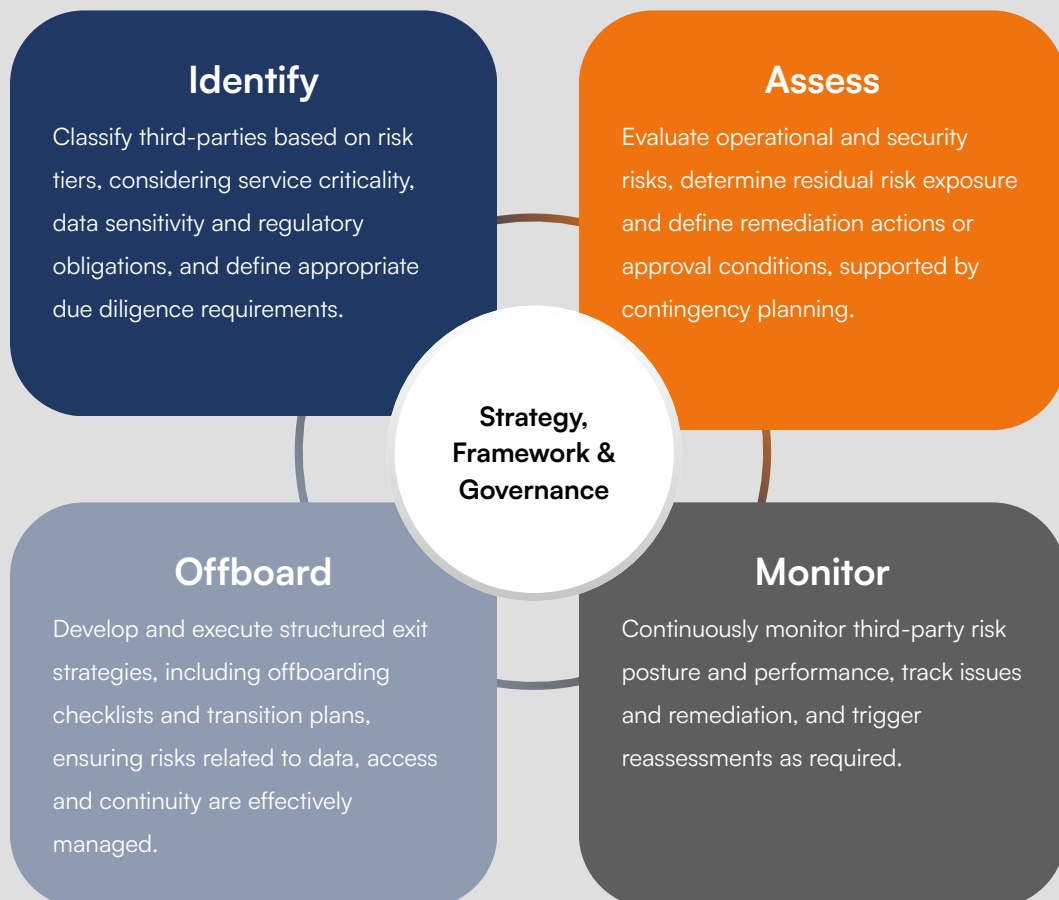

We bring deep expertise in strengthening risk visibility, enhancing governance and improving resilience across complex third-party ecosystems

We design and embed risk-based and practical Third-Party Risk Management (TPRM) frameworks that improve visibility of supplier risk and risk exposure, enforce appropriate levels of governance and enable more effective oversight of critical service providers.

Leveraging our risk and compliance experience, we equip organisations with the appropriate tools to empower confident and compliant decision making, and strengthen overall resilience.

We also support organisations in responding to evolving regulatory expectations, including APRA CPS 230 Operational Risk Management and the Security of Critical Infrastructure Act (SOCl), strengthening oversight of material service providers that support critical operations.

We support organisations across the third-party risk management lifecycle

Our service offering

We support organisations establish and maintain effective governance over third-party relationships

We deliver practical third-party risk management services that strengthen governance, improve supplier risk visibility and enhance oversight across the full lifecycle.

TPRM Governance and Framework Design

We design, uplift and embed TPRM governance frameworks, policies and operating models to support end-to-end management of third-party risk, from onboarding through to offboarding. This includes defining governance structures, roles and responsibilities, and integrating TPRM into broader risk management practices to enable consistent oversight and stronger risk-informed decision making.

Vendor Identification and Classification

We support organisations to identify and classify third-parties based on risk and criticality, using tailored frameworks aligned to business structure and regulatory expectations. This includes developing or uplifting vendor registers to ensure accurate and current information is maintained, enabling prioritised due diligence and clearer oversight of critical providers.

Vendor Risk Assessment and Due Diligence

We design and implement vendor risk assessment processes and tools to support the collection and evaluation of third-party risk information across operational and security domains. This enables organisations to better understand control environments, identify risk exposures and take timely, informed actions to address gaps or high-risk areas.

Vendor Monitoring and Reporting

We develop and implement monitoring and reporting frameworks to provide ongoing visibility of vendor performance and risk. This includes establishing key risk metrics, dashboards and reporting processes to track issues, monitor remediation and support proactive management and reassessment of third-party risk.

These capabilities are delivered through flexible delivery models tailored to your organisation's structure, scale and maturity.

TPRM System Implementation

We design and implement TPRM solutions within GRC systems and tooling to support centralised, end-to-end third-party risk management. This includes configuring workflows, assessment processes and reporting capabilities to improve visibility, consistency and efficiency across business units.

Managed Services

We provide flexible access to TPRM expertise through a managed service model, supporting the execution of core processes such as vendor assessments, onboarding, monitoring and reporting. This enables organisations to scale capability, maintain consistency and strengthen oversight of third-party risk.
